I am a junior in the Indigenous American Indian Studies Bachelor's program at Haskell Indian Nations University. A current intern with Haskell Environmental Research Studies (HERS), studying the effects of lake sturgeon population on Menominee Nation culture. During the school semester's I take part in the work study program and work as a personal assistant in the Facilities Department on Haskell campus since 2017. With working at Haskell, I learned about multitasking, time management, and how to work with a diverse group of people. I am very organized in school and work, applying the skills I learn from both to assist in everyday life situations. Very family oriented, social, and motivated to take on new tasks and develop new skills
